General Description

The HG163YA-3 is a 6-bit GaAs pHEMT digital phase shifter which is rated from 2.6 to 3.6 GHz, providing 360 degrees of phase coverage, with a LSB of 5.625 degrees. The phase shifter features very low RMS phase error of 1 degrees and extremely low insertion loss of 4.5 dB across all phase states. This high accuracy phase shifter is controlled with positive logic of 0/+5V, and requires -5V bias supply.

Notes:

1. The chip should be stored in a dry and nitrogen environment, and used in a clean environment.
2. GaAs material is brittle, can not touch the surface of the chip, must be careful when using.
3. The chip is welding with conductive adhesive or alloy (alloy temperature should not exceed 300°C, and no more than 30 sec.), and should make it fully grounded.
4. The chip microwave port and substrate gap is not exceeding 0.05mm, with $\Phi 25\mu\text{m}$ double gold wire bonding, suggested length of gold wire 250~400 μm .
5. Chip microwave port without DC blocking capacitor.
6. The chip is sensitive to static electricity, and should be protected against static electricity during storage and use.
